

INSTRUCTIONS

Print out this page on some thick paper.

Take a sharp craft knife and carefully cut out the black bits from the image on the right.

Fix the stencil to a wall that won't get you in too much trouble – either use sticky tape to hold it secure, or use a hand you don't mind getting covered in paint.

Shake your can of spray paint for a good few seconds first, and let off a short burst to clear the nozzle.

Hold your can about 8 inches away from the stencil and spray in short bursts so that it doesn't run down the wall.

TOP TIP

For a longer lasting stencil, stick it onto some cardboard and cut through that.

SNEAKIER TOP TIP

Hide stencils in a pizza box and keep your hands clean for an easier escape ;-)
